Meet the new 5096S

Manitex continues its...

commitment to new **product development**, driven by **customer input**.

More than 20 new models since 2003.

What's Your Market?

Need a Taxi? Our latest offering is the most versatile Manitex yet. The new **5096S Truck Mounted Crane** with 152' tip height, offset jib and a strong load chart is an unbeatable value that replaces traditional, more expensive, solutions.

If it's **Power Distribution**, the **124SX**, **35124C** and **40124S** provide the widest selection of options. All three platforms have man basket heights to 166'.

Heavy Lifts pay the bills? The **40124SHL** provides more capacity at radius than any boom truck in the market.

If **Duty Cycle** is the key, all **Manitex S** and **SX** series boom trucks are configured with feather soft controls for multifunction operation, continuous rotation, retracted outrigger charts and oil coolers as standard. The **30112S**, our latest addition to the S series line, reaches new heights with a maximum tip height of 168'.

Payload necessary? The **26101C** weighs up to 5,000# less than competitive models and the **30102C** provides up to 10,000# payload on a 54,000 GVWR chassis.

Wireline Work? The **102WL** provides 30 ton crane capacity and the **124WL** offers 134' tip height without a jib.

Truss work is made efficient with the **2281T**, the highest capacity tractor mount on three axles.

Five new **SC** series models support **Sign Erection and Service** with working heights from 62' to 97'. Our newest, the **SC-85** provides 85' working height and 12 ton crane capacity.

GRÚAS HIDRÁULICAS SOBRE CAMIÓN ■ TRUCK LOADER CRANES

Manufacturer • Fabricante	Stand
Atlas -Terex	G-200
Altec Industries	G-270
Auto Crane	C-4233
Elliot Equipment	G-248
Furukawa - Unic	RL-44013
Heila Truck Loaders	C-7107
Hiab	RL-45013
Iowa Mold Tooling	N-2141/S813
Manitex	G-330
Palfinger	S-610
PM	RL-43033
Stellar Industries	G-230
Summit	N-2859
Tadano	G-328
Terex	G-200

its outrigger design. Another new crane, seen at last year's ICUEE is the 301125 with its 'ride around' operators control station.

Right behind you is the **Tadano** stand with two regular boom trucks and a new 35 ton crane, the TM35100 with a fully enclosed cab that owes more to a regular truck mount. The 10 ton TM1052 and 20 ton TM20110 will also be on display.

The Riviera Hall is behind the Gold Lot, if you head inside you will find **PM, Hiab, Furukawa-Unic** and **Heila**. On the PM stand you can see the PM85SP, the largest model in the company's line-up, making its North American debut. The 85027SP+J1204.20 version will be on display with a maximum hook height of 108 feet (33 m) at which it can lift 2,010 lbs (910 kg).

Esta es una categoría mezclada, desde las grúas telescópicas más pequeñas, las grúas europeas tipo articulado hasta los camiones grúa de 50 ton que tienen más en común con una grúa sobre camión que una grúa autocargante.

Los stands están repartidos por toda la feria, por lo que comenzaremos en el área Gold con los fabricantes sobre camión. Empezamos con **Altec**, el fabricante de grúas y plataformas. Altec tiene grúas desde 18 a 38 tons de capacidad de elevación.

Ahora diríjase a **Manitowoc** y pasará por **Elliot Equipment** que dispone de camiones grúa utilitarios. Casi cruzando el pasillo está el impresionante stand de Manitowoc, donde encontrará el fabricante de grúas sobre camión **National crane**, con el modelo 900H en exposición.

Cruzando el pasillo está **Manitex**, que mostrará su nuevo modelo de 50 ton 50110S con su pluma de 110ft y máxima altura de trabajo de 164ft. Echele un vistazo a su diseño es estabilizadores. Otra nueva grúa, vista el año pasado en ICUEE es el modelo 301125 con estación de control.

Justo detrás de Ud. se encuentra **Tadano** con dos grúas sobre camión y una nueva de 35 ton, la TM35100 con cabina totalmente cerrada, que parece más una sobre camión que una autocargante. La TM-1052 de 10 ton y la TM20110 de 20 ton estarán expuestas.

El Hall Riviera está detrás del área Gold, si va hacia allá encontrará **PM, Hiab, Furukawa-Unic y Heila**. En el stand de PM podrá ver la PM85SP, el mayor modelo de la compañía que hace su debut norteamericano. Una versión de la 85027SP+J1204.20 estará expuesta con una altura máxima e gancho de 108 feet (33m) donde puede elevar 910 kgs.

La unidad está equipada con giro continuo, sistema de manejo Power Tronic de PM, que proporciona un continuo flujo de información a la pantalla control remoto y a la unidad central, instalada en la columna de la grúa.

De vuelta al área Gold y un paseo hacia el puente verá el stand de **Terex**, que expone tanto grúas sobre camión como las autocargantes hidráulicas de **Terex Atlas**. Su mayor exposición será el modelo BT 4792 de 21291 kg de capacidad y altura de 44 m, una plataforma para dos personas puede acoplarse de manera opcional para aumentar la versatilidad, mientras el indicador electrónico del momento de carga y los dispositivos anti bloqueo son de serie junto con la estación dual de control.

Diríjase al área Silver donde encontrará **IMT y Palfinger**. Espere a ver una gama de equipos de grúas, carretillas para acoplar en camiones, encabezado por su modelo PK150002, grúa hidráulica autocargante de 39,864 kg.

This is a very mixed category, ranging from the smallest telescopic service cranes to European type articulated cranes to 50 ton boom trucks that have more in common with a traditional truck mounted mobile crane.

Stands are dotted all over the show, so we will begin in the Gold Lot with the boom truck manufacturers. We start with **Altec** the crane and aerial lift producer which has examples of its boom truck range from 18 to 38 tons lift capacity.

Now head towards Manitowoc passing **Elliot Equipment** en-route, with its range of utility boom trucks. Almost across the aisle is the huge **Manitowoc** stand, where you will find leading boom truck manufacturer **National Crane**. The company has a model 900H on display.

Cross the aisle to **Manitex** which is showing its new 50 ton 50110S with its 110ft main boom and 164ft maximum tip height. Take a look at

The unit is equipped with continuous slewing and PM Power Tronic electronic management system, which provides a continuous flow of information to the remote control screen and central control unit.

Return to the Gold Lot and head towards the bridge to the **Terex** stand. Terex has both a boom truck line and the **Terex-Atlas** articulated loader crane range in its armory. Its main exhibit is the **Stinger**-class BT 4792 47,000lbs lifting capacity /144ft tip height. An optional two man work platform can be quickly connected to increase versatility, electronic load moment indicator and anti-two-block devices are both standard along with dual control stations.

Head over the road now to the Silver Lot where you will Find **IMT** and **Palfinger**. Expect to see a range of the company's cranes, piggy back forklifts and tail lifts, topped by the PK150002 -88,000 lb knuckle boom crane.
