

Crane Operator Rodeo
at ConExpo 2011

March 22 - 26

**Open During
Regular Show Hours**

Gold Lot Adjacent to Liebherr
Booth #G370

*Equipment provided by
Crane Institute of America and Liebherr*

**FREE to Participate
for All ConExpo Attendees**

Reliability + Strength

The new Penny + Giles hand operated JC1500 joystick – with a high integrity contactless Hall-effect sensing system – is now available.

Specific for single-axis operator control of cranes, aerial work platforms and other off-highway vehicle applications.

The joystick is available with a range of user-defined features, enabling designers to quickly and efficiently build safe and reliable control systems:

- + Spring return or friction hold lever action
- + Optional lever lock and mechanical detents
- + Choice of handles and grips (or no handle fitted)
- + Operates from 5 or 9-30Vdc supply
- + Analog (Vdc) or Digital (PWM) outputs
- + Dual channel output with optional ramp directions
- + IP69K protection above the panel on selected handles

Call or email for a Product Range catalogue today!

telematics are interconnected and wired onto ever more sophisticated rated capacity indicators and data loggers. At the same time radio remote controllers are becoming more user friendly and cost effective. Here at Conexpo some of the best electronic and safety system manufacturers have their latest ideas on show here are a few highlights.

We start at the back of the Gold Lot in the Crane Rodeo where you can try out one of the latest crane simulators and possibly win a prize sponsored by Hirschman electronics. Moving into the Gold Lot you'll find SMIE and its tower crane anti-collision systems which have developed exponentially in the past few years. Cross the Liebherr stand to LSI and its range of stainless steel wireless crane safety devices and rated load indicators, designed for easy retrofitting to older cranes. We now move over the road to the

South Hall and HBC Radiomatic and its new remote controllers. The new spectrum D transmitter comes with a 3.5" color TFT non-reflective display screen allowing it to be seen clearly in harsh sun, while making the most of the latest crane system displays. In the same hall Autec is introducing its Dynamic Series with three transmitters on display – the FJS, FJL and FJM. All can send both proportional and digital commands and receive data feedback messages that appear on the display. Next stop is Hirschmann-PAT and its new wireless sensors and in-cab consoles. The company is also offering a number of educational seminars during the show so stop by to find out more. In the Hilton Centre Orlaco is demonstrating its latest camera systems. A boom or jib-trolley mounted camera provides the operator with a significant tool to help improve safety – yet their use is still the exception, rather than the rule.

Electronics are now a standard feature on cranes, platforms and telehandlers yet their impact has been modest so far. This is set to change as everything from boom tip cameras to remote diagnostics and advanced

Electronics are now a standard feature on cranes, platforms and telehandlers yet their impact has been modest so far. This is set to change as everything from boom tip cameras to remote diagnostics and advanced

La electrónica es ahora una característica estándar en las grúas, manipuladores telescópicos y plataformas, sin embargo, su impacto ha sido modesto hasta ahora. Esto va a cambiar, desde cámaras en el extremo de la pluma hasta diagnósticos remotos y la telemática avanzada interconectada y por

cable en los indicadores de capacidad cada vez más sofisticados y registradores de datos.

Comenzamos en la parte posterior del lote en el Rodeo de la grúa, donde usted puede probar uno de los últimos simuladores de grúa y posiblemente ganar un premio patrocinado por Hirschman

electronics. Entrando en el área Gold encontrará SMIE y sus sistemas de grúas torre de anti-colisión que se han desarrollado

de manera exponencial en los últimos años. Cruce el stand de Liebherr hacia LSI y su gama de dispositivos inalámbricos de seguridad de acero inoxidable de grúas y los indicadores de carga, diseñado para la adaptación fácil de grúas antiguas. Ahora por el South Hall hacia HBC Radiomatic y sus nuevos mandos a distancia. El nuevo espectro transmisor D viene con una pantalla a color de 3,5" no reflectante que le permite ser visto claramente a pesar del duro sol. En la misma sala Autec presenta su Dynamic Series,

con tres transmisores en la pantalla - FJS, FJL y FJM. La siguiente parada es Hirschmann-PAT y sus sensores inalámbricos y consolas en la cabina. La compañía también está ofreciendo una serie de seminarios educativos. En el Hilton Centre, Orlaco está demostrando su más reciente sistemas de cámaras.

The number of component manufacturers has increased dramatically this year, providing an excellent opportunity to learn what is planned for the future and influence the direction of new developments. At the same time there are far more suppliers of accessories and lifting gear that may just have an idea that could change your business. Most component suppliers can be found in the South Hall.

El número de fabricantes de componentes se ha incrementado dramáticamente este año, ofrecen una excelente oportunidad para aprender lo que está planeado para el futuro e influir en la dirección de los nuevos desarrollos. Al mismo tiempo, hay más proveedores de accesorios y dispositivos de elevación que le pueden dar una idea para cambiar su negocio. La mayoría de los proveedores de componentes se pueden encontrar en el Hall Sur.
